

# ThinkOnward Projects

Get fresh insights. Focus on decisions. Move faster.

Get access to geoscience and data expertise without the hassle or ongoing expense of adding permanent overhead. Choose ThinkOnward as your project partner to unlock immediate access to our staff of expert geo and data scientists, resident experts, and global network.

## Expand your teams whenever you need to

Build or augment your subsurface teams at lightning speed. Our growing community of experienced geoscientists, data scientists, and energy industry professionals covers six continents and 20 major global oil and gas hubs.

## Tap into expert-led project management

Our resident industry experts all have geoscience and data science backgrounds, understand your needs intuitively, and use proven frameworks to ensure that your project delivers the results you need on time and on budget.

## Make use of our advanced technology

Your projects will be managed using a cloud-based virtual workstation that's custom-configured with industry-leading and cutting-edge tools, enabling the highest level of security, speed, and collaboration.

## Make high-resolution decisions faster

Get the insights you need to make decisions with confidence. Move faster with bid round decisions and tap into local basin expertise. Let fresh expert eyes reevaluate your existing assets to find innovative ways to optimize their value.

**2,000+** years of energy industry expertise

**200+** solutions submitted to industry challenges

**100+** years of client manpower saved

**\$200M+** ROI delivered to our clients

## Project examples

ThinkOnward has delivered more than 70 projects successfully so far, ranging from three-week data labeling projects to six-month deep dives into regional and mega-regional opportunities.

### Western United States

Mapping surficial basalts from satellite data and labeling the satellite images with all the identifiable basalt flows using Label Studio under the guidance of the ThinkOnward resident experts. **DELIVERED IN 3 WEEKS.**

### Onshore Colombia

Consolidating the understanding of plays and prospectivity across onshore Colombia. The team used published literature and information to create an index of resources and prospectivity, plays, and recent discoveries to build an opportunity catalog. **DELIVERED IN 8 WEEKS.**

### Offshore Brazil

Enhancing the understanding of the Pelotas Basin using a structural-stratigraphic framework and play-based analysis to provide high-quality and consistent interpretation as a springboard for prospectivity analysis. **DELIVERED IN 20 WEEKS.**

# The project process at a glance

We have a proven framework to deliver projects for our clients. From the first conversation to the final deliverables, ThinkOnward works with you to ensure your project objectives and deliverables are addressed, bringing the right expertise and providing the right tools.

“Excellent coordination by the team. We greatly valued them managing all contracts and related housekeeping behind the scenes, freeing up the Evaluation Team to ensure science-based interaction and quality delivery that is on time and according to spec.”

**Richard K.**

## FRAMING

1 to 3 weeks

## CREATION

2 to 4 weeks

## EXECUTION

2 to 6 months

## DELIVERY

1 week

### Defining your project need:

We work with you to understand your challenges, time frame, skill requirements, and project goals.

### Framing and proposal:

We share our thoughts on the project goals, approach, data requirements, timeline, and desired outcomes.

### Scope alignment:

We formally align on a final project scope, approach, and budget.

### Project posting:

While we anticipate finding the right skills within the ThinkOnward community, we are prepared to extend our search beyond if needed.

### Data upload:

We support you by compiling the data sets required for your project and making sure that they are robust and secure and will allow the team to successfully deliver the project.

### Expert/team selection:

We finalize the team — either with our selected ThinkOnward experts or by augmenting your current team.

### Remote execution:

Using our highly secure, cloud-based virtual workstations, we will execute your project with the highest level of security, speed, and collaboration.

### Steering and feedback:

We will review progress regularly, identify risks, and remove any blockers to deliver the project goals.

### Project completion and delivery:

Once the project is complete, we review the outcomes with you, hand over the analysis, data, and insights generated, and ensure that we have fully completed the project to your requirements and satisfaction.
